Improving Point-Cloud Accuracy from a Moving Platform

Håkan Almqvist, Martin Magnusson, Todor Stoyanov, and Achim J. Lilienthal
AASS, Örebro University, Sweden

• We present a method for improving the accuracy of 3D point clouds made while moving over rough terrain.
• No requirements on particular features of the environment, or inertial sensors.
• Perform local, per-scan, pose-graph SLAM using NDT to form the constraints of the graph.

Point cloud before (above) and after (below) improvement.
